

LEKTÍLL

THE BULBIS LAZUL

Short Top-Down Desktop Game Development Plan

Prepared for team planning and Cursor implementation

Version 1.0

1. Executive Summary

This plan defines a short desktop-optimized top-down story game set in the world of Lektíll. The game should feel like a compact, narrative version of early Pokémon exploration: the player walks through a tile-based world, speaks with people, investigates places, unlocks a mission, navigates a maze, collects a rare orb called a Bulbis Lazul, and reaches a complete ending.

The first playable version should be intentionally small. It should not attempt to become a full RPG. The goal is to create a complete, shareable, atmospheric proof of concept that communicates the world, establishes the central mystery, and proves the game loop.

Design goal

Build a complete 5 to 10 minute game that starts with quiet exploration, shifts into cosmic discovery, and ends with the player finding the first Bulbis Lazul.

Core experience in one sentence

The player begins as Mark Samson in a medieval New York farming town, learns strange rumors from townspeople, witnesses the emergence of Lektíll, receives an overwhelming nonverbal message, enters an underground maze, finds the Bulbis Lazul, and is shown what this discovery means for the future of the world.

Recommended build approach

The recommended first version is a browser-based desktop game using HTML, CSS, and vanilla JavaScript with an HTML5 canvas. This keeps the game easy to run, easy to share, and practical for Cursor to generate and revise.

- **Primary platform:** desktop browser.
- **Controls:** arrow keys or WASD for movement; E or Space to interact.
- **Game style:** top-down tile-based exploration with dialogue, collision, map transitions, and a final ending screen.
- **Art direction:** dark fantasy pixel-art-inspired placeholder graphics using canvas shapes, blue-green glow effects, wet soil, stone walls, and ancient underground atmosphere.
- **Scope:** small but complete, with one town, one emergence site, one underground maze, and one final chamber.

2. Source World and Narrative Foundation

The game is based on the provided Lektíll world outline and visual references. Lektíll is a primordial reptilian entity from the Fifth Age, dwelling beneath the crust with ancient creatures. It surfaces rarely to feed on moisture-rich soil and Bulbis Lazuls, which are orb-like sources of power similar to Ender Pearls. Lektíll is approximately 1,600 meters tall.

In the larger story, Mark Samson created Lektíll as a reset mechanism to wipe away corrupt societies and allow a new society to begin. Mark does not initially know this because he is an immortal soul reincarnating in different human bodies across millions of years. When Lektíll emerges, Mark recovers the memories of his past lives and must decide whether the current society deserves to continue existing.

For the short game, this deeper mythology should be introduced but not fully resolved. The game should focus on the first awakening, the first mission, and the first Bulbis Lazul. The ending should feel like the beginning of a much larger story.

World details that should appear in the game

World element	How it appears in the short game
Lektíll	A massive reptilian presence shown at the emergence site. It should feel too large to fully fit on screen.
Fifth Age	Mentioned by inscriptions and old myths, not fully explained.

Bulbis Lazul	The final collectible orb. It glows blue-green and is treated as sacred by some humans.
Moisture-rich soil	Visual motif in the town, emergence site, and underground maze. Farmers notice the soil changing.
Mark Samson	The player character in this prototype. He begins as an ordinary person and slowly becomes aware of his role.
Emotional communication	Lektill does not speak normally. It transmits memory, judgment, pressure, and feeling.
Judgment of society	The game hints that Mark will eventually decide whether humanity is worthy of survival.

Tone and theme

- **Wonder mixed with dread:** Lektill should feel beautiful, ancient, and terrifying.
- **Small human life versus cosmic responsibility:** Mark has ordinary relationships, but he is pulled into a decision beyond ordinary life.
- **Memory and identity:** The story should suggest that Mark is more than this single lifetime.
- **Religious misunderstanding:** Some humans treat Bulbis Lazuls as holy objects because they do not know what they really are.
- **Moral burden:** The short game only introduces this burden, leaving the deeper ethical choice for future chapters.

3. Player Goals and Game Loop

Main player goal

The player goal is to move through the world, learn what is happening, receive the mission from Lektill, traverse the underground maze, and find the Bulbis Lazul.

Core gameplay loop

1. Explore a small top-down area.
2. Talk to NPCs or examine objects.
3. Receive new pieces of worldbuilding and story information.
4. Unlock the next area or objective.
5. Navigate a maze-like space using movement and collision.
6. Interact with the Bulbis Lazul.
7. Watch the ending story screen and choose to restart or exit.

Objective states

Game state	Objective text shown to player	Completion trigger
Opening	Talk to the townspeople.	Player talks to at least three important NPCs.
After town conversations	Go north to investigate the disturbance.	Player reaches the northern path transition.
Emergence site	Approach Lektill.	Player moves close enough to the Lektill area.
After Lektill message	Find the Bulbis Lazul underground.	Player enters and completes the maze.
Final chamber	Take the Bulbis Lazul.	Player interacts with the orb.
End state	The first offering has been found.	Ending panel is displayed.

4. Game World Layout

Area 1: Farming Town

The town is the player's ordinary world. It should feel calm but uneasy. People are still going through their routines, but the ground has shifted, the soil is behaving strangely, and rumors of glowing stones have resurfaced.

Key locations

- Player home: starting point and emotional anchor.
- Town square: central hub with multiple NPCs.
- Farm fields: show wet soil, drying crops, and farmer dialogue.
- Small shrine: introduces Bulbis Lazul worship indirectly.
- Northern path: blocked until the player has spoken to enough NPCs.

Primary purpose

The town teaches the player controls, establishes the human stakes, and introduces the first mystery before the supernatural event begins.

Area 2: Lektill Emergence Site

The emergence site is the first major shift in tone. The player leaves the village and sees Lektill rising from the earth. Lektill should dominate the top of the screen or background. The player should not see the whole creature because it is too large.

Visual requirements

- Massive reptilian head or body shape at the top or edge of the screen.
- Dark scales represented with repeated oval or block patterns.
- Blue-green glowing pores or bioluminescent dots.
- Crowd figures, banners, and worshippers for scale.

- Wet soil and scattered glowing orbs around the environment.

Primary purpose

This area delivers the narrative turn. When the player approaches Lektíll, the game temporarily stops normal exploration and triggers the emotional memory sequence.

Area 3: Underground Maze

The underground maze is the main gameplay challenge. It does not need enemies in the first version. The challenge is exploration, navigation, atmosphere, and discovery.

Maze design principles

- Short enough to finish in a few minutes.
- Large enough to feel like a real underground space.
- Clear collision walls so the player cannot walk through rock.
- Several dead ends but no extreme frustration.
- Ancient inscriptions placed at meaningful points.
- Subtle environmental guidance using glowing soil or orb fragments.

Area 4: Bulbis Chamber

The Bulbis Chamber is the final room. It should be quiet, glowing, and ceremonial. The Bulbis Lazul should sit in the center as the only important object. Interacting with it ends the playable section.

Ending feel

The ending should not feel like the whole story is solved. It should feel like the first chapter has closed and the real moral burden has just begun.

5. Characters and Dialogue

Dialogue should be short, readable, and atmospheric. NPCs should not explain the entire mythology directly. They should reveal fragments of the world from their own limited perspective.

Character	Role	Sample dialogue	Gameplay function
Mother	Human anchor and ordinary life	The ground shook before sunrise. Stay close to town today.	Introduces concern and personal stakes.
Taylor	Childhood love interest and emotional conflict	Everyone is looking north. But you look like you already know what is there.	Suggests Mark is changing before he understands why.
Farmer	Practical witness to environmental change	The soil is wet, but the fields are drying from underneath.	Introduces moisture-rich soil as a world clue.
Old Worshipper	Religious interpretation of Bulbis Lazuls	Long ago, people found blue-green stones underground. We called them holy.	Foreshadows the orb and human misunderstanding.
Town Guard	Progress gate	No one goes north until we know what came out of the ground.	Blocks the path until the player has talked to enough NPCs.
Crowd Worshipper	Scale and awe at the emergence site	It is not a beast. It is an answer.	Builds atmosphere near Lektíll.

Dialogue system requirements

- Dialogue box appears at the bottom of the screen.

- Dialogue pauses or slows player movement while open.
- Player advances dialogue with E or Space.
- Each NPC has a name label and one to three lines of text.
- Some dialogue changes after the mission begins.

Lektíll communication style

Lektíll should not use normal quoted speech. The world outline says Lektíll communicates by placing emotions in the mind rather than speaking in ordinary language. The game should represent this through fragmented sensory text, memory flashes, and short atmospheric statements.

A pressure enters your mind.
 Not words.
 Memory.
 Judgment.
 Seventy-two lives unfold at once.
 You remember what you are.
 You remember what you made.
 Find the Bulbis Lazul.
 Bring it below.

6. Controls, UI, and Interaction

Controls

Action	Primary input	Alternate input
Move up	W	Arrow Up
Move down	S	Arrow Down
Move left	A	Arrow Left
Move right	D	Arrow Right
Interact / advance dialogue	E	Space
Restart after ending	R	None
Exit after ending	Escape	None

On-screen UI

- **Controls panel:** small panel showing movement and interaction keys.
- **Objective panel:** shows the current story objective.
- **Dialogue box:** appears when the player interacts with NPCs, signs, inscriptions, Lektíll, or the Bulbis Lazul.
- **Ending panel:** full-screen story text with restart and exit instructions.

Interaction rules

- The player can interact when standing next to or facing an NPC/object.
- Interactable objects should have a subtle label or glow when nearby.
- NPCs and objects should use rectangular collision zones.
- The Bulbis Lazul should require interaction rather than automatic pickup so the final action feels intentional.

7. Technical Architecture

The first version should be built with simple files and no external libraries. This makes it easier to understand, debug, share, and revise.

Recommended file structure

```
lektill-game/  
  index.html  
  styles.css  
  main.js  
  README.md
```

Optional future file structure

```
lektill-game/  
  index.html  
  styles.css  
  main.js  
  README.md  
  assets/  
    player.png  
    lektill.png  
    bulbis-lazul.png  
  tiles/  
    soil.png  
    stone-wall.png  
    shrine.png
```

Main systems

System	Purpose	First-version implementation
Canvas renderer	Draw the game world, player, NPCs, objects, and effects.	Use HTML5 canvas and draw shapes directly.
Tile map	Represent each area as a grid.	Use arrays of numbers or characters for floor, wall, path, shrine, and transition tiles.
Player controller	Handle keyboard input and movement.	Use grid-based movement or smooth tile collision.
Collision system	Prevent walking through walls, NPCs, and blocked objects.	Check next position against solid tiles and object rectangles.
Dialogue system	Show NPC and object text.	Reusable dialogue box with speaker name and lines.
Story flags	Track player progress.	Boolean flags and counters in a simple gameState object.
Map transitions	Move from town to emergence site to maze to chamber.	Change currentMap and reset player spawn position.
Ending state	Stop gameplay and show final story.	Set gameFinished true and render full-screen overlay.

Story flags

```
const gameState = {  
  talkedToMother: false,  
  talkedToTaylor: false,  
  talkedToFarmer: false,  
  talkedToWorshipper: false,  
  lektillAwakened: false,
```

```
missionStarted: false,
hasBulbisLazul: false,
gameFinished: false
};
```

Map object concept

```
const maps = {
  town: {
    name: "Farming Town",
    tiles: [...],
    npcs: [...],
    objects: [...],
    transitions: [...]
  },
  emergence: { ... },
  maze: { ... },
  chamber: { ... }
};
```

8. Art Direction and Atmosphere

The prototype can use placeholder shapes, but it should still have a strong visual identity. The goal is not polished final art. The goal is a readable, atmospheric world that clearly communicates Lektúll, the Fifth Age, and the Bulbis Lazul.

Visual palette

- Town: muted browns, field greens, weathered wood, gray stone, pale sky accents.
- Emergence site: dark earth, black-green scales, torchlight, crowd silhouettes, blue-green bioluminescence.
- Underground maze: near-black stone, wet soil, glowing fungus, blue-green orbs, ancient markings.
- Bulbis Chamber: high contrast darkness with a central glowing orb.

Placeholder asset guide

Asset	Prototype representation
Player	Small dark rectangle or simple human sprite with a lighter face pixel.
NPCs	Small rectangles with different colors or labels.
Walls	Dark gray or black stone tiles.
Wet soil	Brown floor with darker patches.
Lektúll	Huge dark ellipse or irregular shape with scale circles and glowing dots.
Bulbis Lazul	Glowing blue-green circle with pulsing radius.
Shrine	Small stone structure with blue-green center.
Inscriptions	Stone tablets with interactable text.

Reference images

The uploaded visual references suggest a monumental creature, worshippers, glowing orbs, underground wetness, and a dark mythic atmosphere. The prototype does not need to recreate these images exactly, but it should preserve their mood: ancient, ritualistic, damp, and cosmic.

9. Implementation Milestones

The project should be built in phases so the team always has a working version. Cursor should be prompted to complete the whole game, but the team should review progress using the milestones below.

Milestone	Deliverable	Done when
1. Project setup	HTML, CSS, JS, canvas, game loop.	The page loads and draws a player on a map.
2. Movement and collision	Arrow/WASD movement with walls.	Player cannot pass through blocked tiles.
3. Town map	Town layout, player spawn, NPCs, blocked north path.	Player can walk around the village and talk to NPCs.
4. Dialogue and flags	Reusable dialogue box and progress flags.	Talking to three NPCs unlocks the northern

		path.
5. Emergence site	Second map with Lektíll visual presence.	Approaching Lektíll triggers the memory sequence.
6. Maze	Underground maze with inscriptions and collisions.	Player can navigate from entrance to final chamber.
7. Bulbis chamber and ending	Final orb interaction and ending screen.	Game can be completed and restarted.
8. Polish pass	UI, objective text, glow effects, README.	Game feels understandable, atmospheric, and shareable.

10. Testing Plan

Testing should focus on making sure the game is understandable and complete. A short game fails if players get lost for the wrong reasons, miss the mission, or cannot finish due to a collision or transition bug.

Functional testing checklist

- Player can move with both WASD and arrow keys.
- Player cannot walk through walls, NPCs, or blocked objects.
- E and Space both open and advance dialogue.
- The northern path stays blocked before enough NPC conversations.
- The northern path opens after at least three required NPC conversations.
- The Lektíll cutscene only triggers once.
- The maze is navigable from entrance to Bulbis Chamber.
- Inscriptions display correctly and do not break movement after closing.
- The Bulbis Lazul interaction triggers the ending.
- R restarts after the ending.
- Escape shows the final exit screen after the ending.

Narrative testing checklist

- A new player understands the basic controls within 10 seconds.
- The opening town establishes that something strange is happening.
- The player understands why the northern path matters.
- The Lektíll scene feels different from normal NPC dialogue.
- The Bulbis Lazul feels important before the player finds it.
- The ending makes clear that this is the first step in a larger story.

11. Scope Control and Stretch Features

Do not include in the first version

- Combat system.
- Inventory beyond the Bulbis Lazul state flag.
- Multiple towns or full world map.
- Save system.
- Animated sprite sheets.
- Branching morality choices.
- Enemies or random encounters.
- Complex cutscene engine.

Good stretch features after the MVP

- Simple title screen with Start Game button.

- Pulsing glow animation for the Bulbis Lazul.
- Subtle screen shake when Lektill emerges.
- One sound effect for dialogue, one for the orb, and one low rumble for Lektill.
- A small inventory panel showing the Bulbis Lazul after collection.
- Additional NPC dialogue after the mission starts.
- A second maze route with optional lore tablet.
- Sprite-based art replacing placeholder canvas shapes.

12. Cursor Prompt

Use the prompt below to have Cursor build the first playable version. It is intentionally specific so Cursor has enough structure to create a complete game rather than a loose demo.

Create a short desktop-optimized top-down story exploration game inspired by classic Pokemon movement, but with an original story world called Lektill.

Build the game as a simple browser-based project using HTML, CSS, and vanilla JavaScript with an HTML5 canvas. Create the following files:

```
index.html
styles.css
main.js
README.md
```

The game should run locally in a browser.

GAME OVERVIEW:

The player controls Mark Samson, a young character in a medieval farming town. The world is centered around Lektill, a massive primordial reptilian entity from the Fifth Age. Lektill lives deep beneath the crust and rarely surfaces to feed on moisture-rich soil and powerful glowing orbs called Bulbis Lazuls. The player begins by exploring the town, talking to people, and learning about strange events. After enough interactions, the player can travel north to the Lektill emergence site. When the player approaches Lektill, they receive an overwhelming emotional message, not normal speech, revealing their mission: find a Bulbis Lazul hidden in an underground maze. The player then explores the maze, finds the Bulbis Lazul, and the game ends with a story screen explaining what happens next.

STYLE:

Use a dark fantasy pixel-art-inspired visual style using simple canvas shapes and placeholder art. The world should feel ancient, wet, earthy, and mysterious. Use dark soil colors, stone walls, and blue-green glowing effects for the Bulbis Lazul and Lektill-related objects. The game does not need external image assets. Use canvas-drawn placeholder graphics.

CONTROLS:

Player movement: Arrow keys or WASD
Interact: E or Space
After game ending: R restarts the game
After game ending: Escape shows an exit screen

GAME STRUCTURE:

The game should have these areas:

1. Farming Town

The starting area. Include a town square, player home, farm field, small shrine, and a blocked northern path. Include at least four NPCs:

- Mother
- Taylor
- Farmer
- Old Worshipper

Each NPC should have dialogue that teaches the player about the world.

Example dialogue:

Mother: "The ground shook before sunrise. Stay close to town today."
Taylor: "Everyone is looking north. But you look like you already know what is there."
Farmer: "The soil is wet, but the fields are drying from underneath."
Old Worshipper: "Long ago, people found blue-green stones underground. We called them holy."

The northern path should be blocked until the player talks to at least three NPCs.

2. Lektill Emergence Site

After the player enters the northern path, switch to a new map. Show a large Lektill presence at the top of the screen using huge dark reptilian shapes, glowing blue-green dots, and scale-like patterns. Include crowd NPCs or worshippers as small figures.

When the player approaches Lektill, trigger a cutscene-style dialogue sequence. Lektill does not speak normally. Display atmospheric text like:

"A pressure enters your mind."

"Not words."

"Memory."

"Judgment."

"Seventy-two lives unfold at once."

"You remember what you are."

"You remember what you made."

"Find the Bulbis Lazul."

"Bring it below."

After this sequence, transition the player into the underground maze.

3. Underground Maze

Create a tile-based maze with walls, paths, dead ends, ancient inscriptions, glowing soil, and one final chamber. The player must navigate through the maze to find the Bulbis Lazul. The maze should be large enough to feel like exploration but short enough to finish in a few minutes.

Include at least three interactable inscriptions:

- "The Fifth Age sleeps beneath all ages."

- "The orb feeds the judge."

- "When Lektill rises, one vessel chooses for all."

4. Bulbis Chamber

At the end of the maze, show the Bulbis Lazul as a glowing blue-green orb. When the player interacts with it, trigger the ending.

ENDING:

Show a full-screen ending panel with this text:

"You lift the Bulbis Lazul."

"It is warm."

"Not alive, but remembering life."

"Far above, Lektill waits beneath the torn sky."

"The world has not ended yet."

"But now the choice belongs to you."

"This was only the first offering."

Then show:

Press R to restart.

Press Escape to exit.

Since a browser cannot reliably close the tab, pressing Escape should show a black screen that says:

"The game has ended. You may now close this window."

TECHNICAL REQUIREMENTS:

Use an HTML5 canvas.

Use a tile-based map system.

Use collision detection so the player cannot walk through walls.

Use a reusable dialogue box system.

Use story flags to track:

- talkedToMother

- talkedToTaylor

- talkedToFarmer

- talkedToWorshipper

- lektillAwakened

- missionStarted

- hasBulbisLazul

- gameFinished

Display the controls on screen.

Display the current objective on screen.

Use clean, readable code with comments explaining the main systems.

OBJECTIVES:

At the beginning, objective should say:

"Talk to the townspeople."

After talking to at least three NPCs:

"Go north to investigate the disturbance."

At the Lektill emergence site:

"Approach Lektill."

After the Lektill cutscene:

"Find the Bulbis Lazul underground."

After collecting the Bulbis Lazul:

"The first offering has been found."

IMPORTANT:

Make the game complete and playable from start to finish.

Do not use external libraries.

Do not require external image assets.

Make it desktop optimized.

Use placeholder canvas art, but make the atmosphere strong through colors, layout, text, and glowing effects.

13. Team Review Questions

Before implementation begins, the team should answer the following questions. These do not block the prototype, but they help align the game with the larger Lektíll story.

- Should the player character be named Mark Samson in the UI, or should the name remain hidden until the Lektíll memory sequence?
- Should Taylor appear only in the town, or should she have one additional line after Lektíll emerges?
- Should the ending imply that Mark will feed Lektíll, refuse to feed Lektíll, or leave the choice unresolved?
- Should the Bulbis Lazul look purely magical, biological, or partly technological?
- Should religious worshippers be portrayed as frightened, devoted, mistaken, or a mix of all three?
- Should the tone lean more tragic, heroic, or mysterious?

14. Final MVP Definition

MVP definition

The MVP is complete when a player can start in the town, learn enough to unlock the path, encounter Lektíll, receive the mission, navigate the underground maze, collect the Bulbis Lazul, read the ending, and restart the game.

Everything beyond that should be treated as polish or a future chapter. The most important thing is that the prototype tells a complete short story and makes the world of Lektíll feel worth expanding.
